### **Legislative and Regulatory Update**

**Session Chair: Ira Goldman, MA**

2019 witnessed considerable legislative and executive branch activity related to healthcare at both the U.S. Federal and State levels. With Democrats newly in control of the U.S. House of Representatives there are new battles shaping up over the Affordable Care Act initiated during the Obama Administration. With the initial stage of a Presidential election already underway, drug pricing was one of the rare areas in which both U.S. political parties agreed that action is necessary, and there was a flurry of legislation related to drug price transparency and negotiations, promotion/facilitation of generic drugs (including changes to the drug patent regime), and “surprise” medical billing. Although PAMA and MACRA become increasingly distant memories, Appropriate Use Criteria (AUC) and Clinical Decision-Support (CDS) efforts continue to progress. Major gaps in coverage and payment continue to challenge the future of nuclear medicine. This session will provide updates regarding an overview of ongoing legislative and regulatory changes impacting the nuclear medicine sector.
